40S ribosomal protein S30.
FAU OR RPS30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRAIN-cv. Columbia; Shinozaki K., Davis R.W., Ecker J.R., Theologis A.; Shinozaki K., Davis R.W., Ecker J.R., Theologis A.; "RIKEN Arabidopsis full length cDNA clones (RAFLs) sequenced by t SSP consortium (Salk/Stanford/PGEC)."; Submitted (OCT-2001) to the EMBL/GenBank/DDBJ databases.

1- SIMILARITY: BELONGS TO THE S30E FAMILY OF RIBOSOWAL PROTEINS.
                                                                                                             "An in situ hybridization screen for the rapid isolation of differentially expressed genes.";
Dev. Genes Evol. 210:28-33(2000).
-I- MISCELLANEOUS: THIS RIBOSOMAL PROTEIN IS SYNTHESTZED AS A C-TERMINAL EXTENSION PROTEIN (CEP) OF A UBIQUITIN-LIKE PROTEIN.
-I- SIMILARITY: BELONGS TO THE S30E FAMILY OF RIBOSOMAL PROTEINS.
                                                                                                                                                                                                                                                                                                   Oryzias latipes (Medaka fish) (Japanese ricefish).

FRABILITY AND INHIBITS TIGHTLY TO DS-DNA, INCREASES ITS THERMAL STABLITY AND INHIBITS TRANSCRIPTIONAL TREGULANOR THROUGH ITS FOUNCTION. MAY BE A GLOBAL TRANSCRIPTIONAL REGULANOR THROUGH ITS ABILITY TO BIND TO CURVED DNA SEQUENCES, WHICH ARE FOUND IN REGIONS UPSTREAM OF A CERTAIN SUBSET OF PROMOTERS. IT PLAYS A ROLE IN THE THERMAL CONTROL OF PILI PRODUCTION. IT IS SUBJECT TO TRANSCRIPTIONAL AUTO-REPRESSION. IT BINDS PREFERRNIALLY TO THE UPSTREAM REGION OF ITS OWN GENE RECOGNIZING TWO SEGMEMYS OF DNA ON BOND SCONTILL TO THE DAYS AND SEGMEMYS OF DNA ON BOND SCONTILL TO THE DAYS AND SEGMEMYS OF DNA ON BOTHER RECOGNIZING TWO SEGMEMYS OF DNA ON BOTHER DAYS OF DNA ON BETTER THE DAYS AND SEGMEMYS OF DNA ON BOTHER DAYS OF DNA ON THE DAYS OF

5Kructural polyprotein (Pl30) [Contains: Coat protein C (EC 3.4.21.-)
(Capsid protein C); Spike glycoprotein E3; Spike glycoprotein E2;
6 kDa peptide; Spike glycoprotein E1].
Venezuelan equine encephalitis virus (strain Mena II).
Viruses; SSRNA positive-strand viruses, no DNA stage; Togaviridae;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       -1- SIMILARITY: THE PROTEASE BELONGS TO PEPTIDASE FAMILY S3.

               FUNCTION: THIS PROTEIN IS LOCATED AT THE 30S-50S RIBOSOWAL SUBUNIT INTERFACE AND MAY PLAY A ROLE IN THE STRUCTURE AND FUNCTION OF THE AMINOACYL-TRNA BINDING SITE (BY SIMILARITY).

SIMILARITY: BELONGS TO THE L19P FAMILY OF RIBOSOWAL PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        "Cloning and sequencing a cDNA encoding human ribosomal protein S25."; Gene 107:329-333(1991).

POLAR FILAMENTS RADIATING FUNCTION: FIMBRIAE (ALSO CALLED PILI), POLAR FILAMENTS RADIATING FROM THE SURFACE OF THE BACTERIUM TO A LENGTH OF 0.5-1.5

MICROMETERS AND NUMBERING 100-300 PER CELL, ENABLE BACTERIA TO COLONIZE THE EPITHELIUM OF SPECIFIC HOST ORGANS.

PONCTION: PRSH SEEMS TO ANCHOR THE PILUS TO THE BACTERIAL CELL. IN ADDITION THE STOICHLOMETRIC RELATIONSHIP BETWEEN PRSH AND PRSA DETERMINES THE PILUS LENGTH.

SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-NOV-1995 (Rel.

"Characterization of a transforming, novel ras-related molecule.",

"Characterization of a transforming, novel ras-related molecule.",

"Submitted (OCT-1997) to the EMBL/GenBank/DDBJ databases.

-i- FUNCTION: MAY SERVE AS AN IMPORTANY SIGNAL TRANSDUCER FOR A NO

UPSTREAM STIMULI IN CONTROLLING CELL PROLIFERATION. WEAKLY

ACTIVATES THE MAP KINASE PATHWAY (BY SIMILARITY).

-i- SIMILARITY: TO RAS PROTEINS. BELONGS TO THE R-RAS SUB-FAMILY.

1. FUNCTION: MAY SERVE AS AN IMPORTANT SIGNAL TRANSDUCER FOR A NUPSTREAM STIMULI IN CONTROLLING CELL PROLIFERATION. MEAKLY ACTIVATES THE MAP KINASE PATHWAY (BY SIMILARITY).

1. TISSUE SPECIFICITY: EXPRESSED IN SKELETAL MUSCLE CELLS.

1. SIMILARITY: TO RAS PROTEINS. BELONGS TO THE R-RAS SUB-FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eukaryota; Métazoa; Chordata;
